ICICSCS 2023 9:36 am
to me

Respected Reviewer,

I am writing in appreciation of your service to the "International Conference on Intelligent, Computing, and Smart Communication Systems (ICICSCS'23)" by assisting us in reviewing the papers. On behalf of the organizing committee, I express my grateful thanks for your prompt and generous support to ICICSCS'23. We also hope that you will continue to support and review for forthcoming ICICSCS and other conferences planned in the near future. Reviewer certificate and other details we will share with you after the conference.

Thank you
ICICSCS'23 Conference desk

5 **Summary of Invention**

In order to find a solution to this issue, a real-time sleep apnea monitoring system that is based on the Internet of Things (IoT) has been created. The user will be able to monitor their sleep using a variety of indices, and they will get alerts through a mobile application if anything out of the ordinary takes place. The device is equipped with a number of sensors that can monitor a person's electrocardiogram (ECG), heart rate, pulse rate, skin reaction, and SpO2 while they are sleeping. This study is quite helpful since it can test sleep indices without waking the person up, and it can also present the results on a mobile application simultaneously with the use of a Bluetooth module. Both of these capabilities are very valuable. The programme was designed to be user-friendly, making it applicable to a wide range of different types of people. In order to measure the various components of the sleep factor, we utilise the Arduino UNO in conjunction with a variety of analogue sensors. The procedure was seen and evaluated while being carried out on the bodies of several individuals. The system keeps an eye on many individuals while they are sleeping so that it may do real-time analysis and diagnosis of sleep apnea. The findings are shown in the mobile application as well as on the monitor that is attached to each Arduino board. The analysis of the collected data may identify sleep apnea in some of the individuals who the system observed, and it can also reveal the reason why sleep apnea occurs in certain individuals. Using the collected data, this study also investigates the characteristics of individuals who are not at risk for developing sleeping disorders. This article will assist everyone in gaining knowledge about sleep apnea, detecting its symptoms, and taking the appropriate precautions to ward against the condition.

A problem known as sleep apnea is characterized by a parallel connection between the human respiratory system and our brain. It suggests that there is a difficulty with breathing and impediments to respiration when the individual is sleeping. Sleep apnea may be broken down into two categories: obstructive sleep apnea (OSA) and central sleep apnea (CSA). There are occasions when you'll experience both of them at the same instant. It is possible to have complicated sleep apnea, however the condition is so uncommon that it cannot be classified as a kind of apnea. Obstructive sleep apnea, often known as OSA, is essentially a congestion of the upper airway. It is brought on by a relaxation of the muscles in our throats, as well as a reduction in the amount of oxygen that travels down the channel between our nose and our throats. This leads to discomfort when breathing, which may occasionally result in more severe difficulties. Central sleep apnea is less common but more concerning than obstructive sleep apnea (OSA). The human brain is the most important maintenance centre of the whole body since every organ and system operates on its directed signal or instruction. As a result, the human brain's central sleep apnea is a very significant scrutiny. When the brain fails to transmit the required instructions or signals to the system that governs our breathing and respiration, this may lead to central sleep apnea. In this case, neurons are unable to send

PATENT OFFICE CHENNAI 24/11/2023 13:22

ONLINE CLASS

During the one-week holidays prompted by the cyclone from December 7th to December 10th, 2023, first-year students engaged in online classes via the WebEx platform from 9.00 a.m. to 1.00 p.m., following a structured schedule:

- 07.12.2023: ENGINEERING PHYSICS & MATRICES AND CALCULUS
- 08.12.2023- ENGINEERING CHEMISTRY & PROBLEM SOLVING AND PYTHON PROGRAMMING
- 09.12.2023- PROFESSIONAL ENGLISH-I & HERITAGE OF TAMIL

This schedule ensured students could keep learning during the unexpected cyclone break, covering different subjects for a well-rounded experience.
