Abstract

Autonomous physical systems like unmanned air vehicles are creating a large market in the current technological scenario. This rapid technology is implemented in military, civil, and other complex applications. This new technology inspired many organizations and other individuals to create a UAV. In recent years with the availability of UAVs and autonomous vehicles familiarly called drones, there must be a threat to the security of autonomous vehicle operating domains or countries. It is often used to connect wireless networks, the cloud, or mobile applications. This physical system has to be monitored properly by the user to restrict unauthorized user interfaces in drones. This chapter deals with the integration of UAVs and cloud computing flying ad-hoc network (FANET), mobile application interface in IoT. The authors will discuss the components of drones used for computing. The drone integration of computing system architecture and types has an important role in the physical system. This chapter discusses the technology development in drones and how the novel ideas may incorporate in future.

Mr. A. Backiyaraj, Assistant Professor, Department of Mechatronics Engineering has published a chapter on the title **Cyber Security in Drone Technology** in the book **Cyber-Physical Systems and Supporting Technologies for Industrial Automation** published by IGI Global Publisher of the Timely Knowledge.

Machine Learning Classifiers to Decrease Diabetic Patients Probability of Readmission

Publisher: IEEE [Cite This](#) [PDF](#)

S Thenappan ; N. Ramshankar ; N. Hemavathy ; V Subashree ; Ravi Ranjan Manjul ; **J Rajeswari** [All Authors](#)

Abstract

Abstract:

Diabetes is a chronic condition that affects millions of individuals around the globe. Unfortunately, patients with diabetes have a significant risk of hospital readmission following discharge. Using machine learning classifiers, proposed a strategy to reduce the risk of readmission for 768 diabetes patients. This utilized a dataset containing patient demographic information, medical history, and laboratory results which are collected from Pima India Dataset. To predict the risk of readmission, and train several Machine Learning models, including Logistic Regression, Random Forest, and Support Vector Machines. The research indicates that the Random Forest model has the maximum degree of precision, at 97%. Age, glucose level, Hba1c levels, and comorbidities have been identified as the most significant factors contributing to the risk of readmission. On the basis of these findings, this recommends a personalized approach to diabetes management that takes individual patient characteristics and risk factors into account. This strategy could reduce the likelihood of readmission for diabetic patients and enhance their overall health.

DEPARTMENT MEETING

Dr. Arul Kulandaivel, Head, Department of Science and Humanities, conducted Faculty Members' Meeting in the Physics lab. The Highlights of the meeting include the preparation of the Autonomous Syllabus for all the Subjects and preparing necessary documents for the same. He asked the faculty members to have a discussion on framing the Syllabus within the discipline. He asked all the class in charges to ensure that there should not be any fee defaulters before appearing for IAT-II examination. The HoD hinted about the completion of files for IQAC audit, Syllabus coverage for all the subjects, the Upcoming Web portal entry- II and the Effective coaching sessions- II for next week. All the Subject faculty members are asked to disseminate the university's repeated questions and question banks to each classes. Finally, he concluded that the Foundation Course for the upcoming First year students is being conducted from 28.07.2023 to 18.08. 2023
